

Open plastic bins are **EXTREMELY** unsafe to leave outside of a school.

When leaving an open bin outside, you don't know when an item is placed in it, who placed the item in it or most importantly, what the item is!!

With the patented Smart Safety Drop, you remotely control when the items can be placed in it and then safely retrieve it when the visitor leaves.

By limiting visitors, you can prevent letting a dangerous person into your school under the false pretense of dropping off a child's forgotten item.

For commercial office use, your staff never has to handle items being dropped off for your employees. Simply have the visitor place the forgotten item in the Smart Safety Drop and keep it secured there until the recipient comes to retrieve it. This will help eliminate any claims of damage to the item caused by your greeting staff.

Smart Safety Drop is built with durable polycarbonate and stainless steel.

And comes with rollers to relocate your unit or bolt it in place.

Clear construction gives you full visibility of the contents and vented sides allow air flow to reduce odors and assist if a K9 search was ever needed.

Smart Safety Drop is built with school safety best practices in mind by a certified school safety specialist.
